Common Core Standards

[CCSS.MATH.CONTENT.3.OA.A.1](#)

Interpret products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each. *For example, describe a context in which a total number of objects can be expressed as 5×7 .*

[CCSS.MATH.CONTENT.3.OA.A.3](#)

Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.

Identify:

Below is a multiplication equation.

$$7 \times 5 = 35$$

What are the factors?

Answer: 7 and 5

What is their product?

Khan Academy

<https://www.khanacademy.org/math/basic-geo/basic-geo-volume-sa/basic-geometry-surface-area/v/nets-of-polyhedra>

Answer: 35

Factors

Situation 1:

My product is 32. The two factors are directly related to each other. If you multiply the first factor by 2, you will get the other factor. These two factors have a product of 32.

Khan Academy

<https://www.khanacademy.org/math/basic-geo/basic-geo-volume-sa/basic-geometry-surface-area/v/nets-of-polyhedra>

What do you think are the factors of 32 that apply to the description?

$$\underline{\quad} \times \underline{\quad}$$

How many factors does 32 have?

Situation 2:

My product is 42. The two factors are consecutive to each other. The two factors
